

Frequently Asked Questions

Who collects the samples?

As this is a DIY kit, you collect the samples and post the swabs back to the Swab First National laboratory for analysis using the supplied express post bag.

What is the difference between the DIY kit and the Premium Property Drug Screen?

As you collect the samples, there are no chain of custody procedures in place for the sample collection aspect of the DIY kit. Whilst Swab First provides instructions and recommendations on sampling, you have complete control on what and where you sample.

With the Premium Property Drug Screening products, the samples are collected by personnel who have been trained by Swab First, this ensures strict sampling and quality assurance protocols are followed each time samples are collected.

How do I receive the report?

You receive the results via email. Results are issued by Swab First within 48 hours of the samples being received at the Swab First National laboratory.
